Project Management Introduction (Fundamentals)

Course Overview

Project management is not just for construction engineers and military logistics experts anymore. Today one is often expected to take on extra assignments, and to get that additional job done well, under budget, and completed on time.

This one-day workshop is not intended to take you from a supervisory or administrative position to that of a project manager. However, these topics will familiarize you with the most common terms and practices in terms of working on projects.

Course Objectives

This one-day workshop teaches delegates how to:

- Describe what is meant by a project.
- Explain what project management means.
- Identify benefits of projects.
- Identify the phases of a project's life cycle.
- Sell ideas and make presentations related to pitching a project.
- Prioritize projects.
- Begin conceptualizing your project, including goals and vision statements
- Use project planning tools.
- Contribute to creating a Statement of Work.

Target Audience

Project Coordinators, Project Administrators or anyone who wants to follow the Project Management Field.

Prerequisite

There are no prerequisites for this course.

Duration

- 1 Day

Course Outline

Defining Projects and Project Management

To begin the day, we will look at what a project is and what project management means. We will also look at some of the key players in a project team.

The Role of a Project Manager

This session will examine some of the key skills that a project manager needs. We will also look at developing a proposal for your project.

How Can Projects Help Me?

Often, people see projects as just more work to do. However, if managed properly, projects can provide tremendous growth and satisfaction for all those involved. We will look at some of the benefits and challenges of projects in a lecture and a case study.

A Project's Life Cycle

This session will explore the four major phases of a project. Delegates will complete a mix-and-match exercise to reinforce the concept.

Selling a Project

If you can identify a project that will bring benefits to your company, that's great. However, getting support for that project can be a whole other story. This session will look at some ways to prioritize and sell projects.

Creating a Vision

Before you start planning a project, you must know what you want the project to achieve. The best way to do this is to create a vision statement. We will discuss what a vision statement is and how to create one. Then, delegates will work in small groups to create a vision for a sample project.

Project Goals

This session will discuss the six key parts to a project goal. Then, delegates will write some goals for a project they are working on.

Using a Target Chart

A target chart can help you identify the biggest priorities in your project and help you see how to achieve your goals. This session will explore how to create and use a target chart.

Preparing Your Project

Once you have decided which project to promote to others and identified your vision and goals, there are some considerations you want to be prepared for. Delegates will discuss six key considerations in small groups.

Laying out the Project

Now that we have a good idea of what our project will entail, we can create the charter and statement of work. We will also look at using a project planning worksheet.
