NLP Tools For Real Life

Course Overview

Neuro Linguistic Programming (NLP for short) is all about bringing your unconscious thoughts to the surface, so that you can have real choice over how you interact with and respond to the world.

Once you have a grasp on NLP's basic principles, you might be interested in learning about some tools that can help you do more with NLP.

This one-day workshop will give you some hands-on experience with important NLP techniques, including anchoring, establishing congruency, developing rapport, creating outcomes, interpreting, and presenting information efficiently, and even some self-hypnosis techniques.

Prerequisite

Delegates should first complete "An Introduction to Neuro Linguistic Programming".

Target

Any person looking to further develop themselves.

Duration

- 1 Day

Course Outline

Developing Rapport

Traditionally, rapport has been defined as a sense of mutual understanding, respect, and friendliness. NLP takes rapport one step further by defining it as the unconscious relationship between two people. This session will give delegates some techniques for establishing and deepening rapport.

Getting in Tune with Yourself

Being congruent or self-aligned means walking the walk and talking the talk. This session will help delegates identify what inner alignment means for them and how to achieve that state.

Creating Comprehensive Outcomes

A lot of traditional management literature focuses on goal setting. NLP frames goals a little differently, phrasing them as outcomes. This session will give delegates a framework for creating outcomes and an opportunity to set some outcomes for themselves.

Creating a Desired State with Anchoring

Anchoring can help you summon up a state of mind at will. This session will teach delegates how to create a basic anchor, as well as how to chain and collapse anchors.

Chunking Information

Psychologist George Miller proposed that we can hold 7 ± 2 pieces of information in our short term memory. In this session, delegates will learn how to use this formula to present and interpret information more effectively.
